

Roland KLENES, Technical Designer

After having completed his technical and electromechanical studies in 2003 at the Athenaeum Royal Vielsalm-Manhay, Roland Klenes acquired professional experience at several Luxembourg companies before joining STAS-LIFTEUROP in October 2013!

Upon his arrival, he joined the design department and the company's innovation team as a technical designer. *"I contributed to the development and creation of specific lifting systems, notably the design, planning and preparation of calculation notes"*. Roland is also tasked with 3D animation of the technical solutions on offer to customers.

Passionate about motor sports and music, he does enjoy his job with STAS-LIFTEUROP, except when it becomes monotonous. *"Sometimes I have to draw up plans which are not so intellectually stimulating, but that is the same for all jobs. You just have to accept that, because the exciting and innovative challenges make up for it."*

Who is Roland?
