

### Thomas BECO, Engineer - Lifting Department

He is the latest arrival in the design department of the ALIPA Group's Lifting Division.

He graduated with a civil electromechanical engineer's degree from the University of Liège (Université de Liège) in 2005. Thomas joined the company in March 2018. With 13 years of initial experience in the automotive industry, then in construction, he provides fresh insight into our company.

A major part of Thomas' work involves reviewing the specific requests of customers in the area of lifting, and offering suitable solutions. According to Thomas, *"it's a job that demands a great deal of preparation, in terms of the time devoted to addressing specific issues, which ultimately paves the way to mastering all aspects of a request and offering solutions tailored to our customers' needs."*

In order to carry out his job as an engineer, Thomas believes that a solid technical foundation is required above all. What is needed, then, is *"discipline for addressing the issues and creativity for finding solutions."*

Thomas lists his main interests as sports, music and photography.
